

Missouri Traffic Crashes

2011
Edition
2010
Statistics

Department of Public Safety
Missouri State Highway Patrol

Introduction

This booklet is published by the Missouri State Highway Patrol as an aid to persons who are interested in the traffic crash problem in Missouri. It contains information which provides for a comprehensive look at the Statewide crash problems as experienced in 2010.

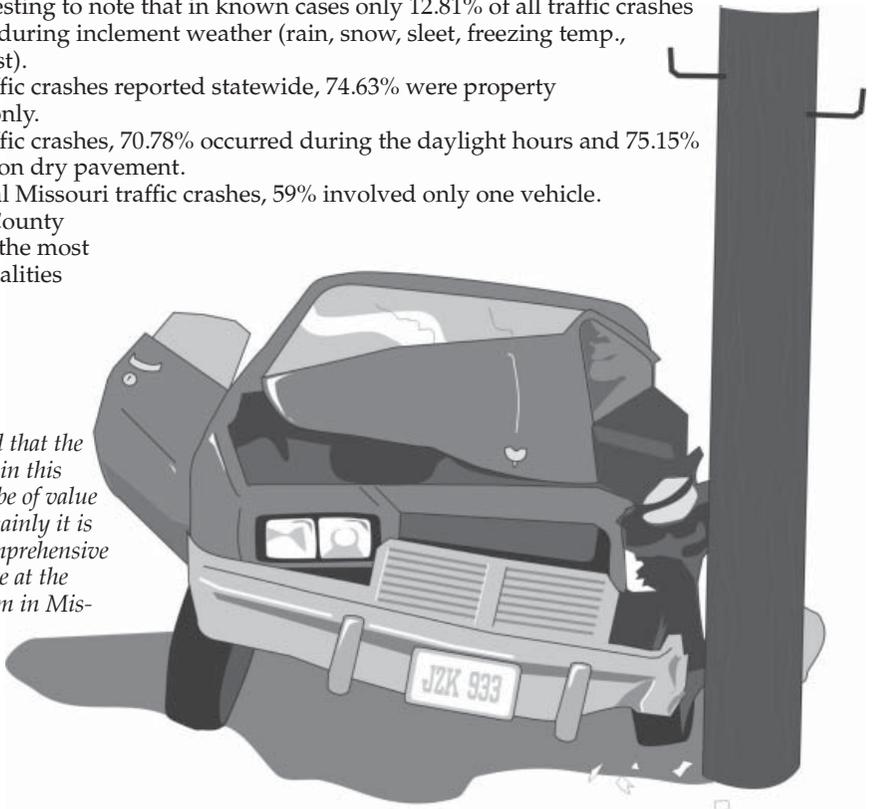

The Missouri State Highway Patrol is the central traffic crash data collection agency for the State of Missouri. Data on both rural and urban traffic crashes is made available to this agency. Law enforcement agencies throughout the State provide the Highway Patrol with copies of their crash reports. All reports of traffic crashes including those investigated by the Missouri State Highway Patrol are tabulated and analyzed by this agency. It is thus due, in part, to the continued cooperation of these law enforcement agencies that a meaningful picture of the statewide crash experience is available to interested persons.

Interesting Statistics

Here at a glance are some interesting statistics found in this booklet:

- In 2010 there were 821 persons killed in traffic crashes in the State of Missouri, 57 (14.5%) less than in 2009. There was a decrease of about 2.89% in total crashes statewide compared to 2009.
- Speed and drinking were the lead Probable Contributing Circumstances in fatal crashes. Of all fatal crashes, 34.5% involved drinking/drugs.
- Of all persons killed in Missouri traffic crashes in 2010, 311 (37.93%) were in the 16-35 age group. The age group most overrepresented in Missouri fatal traffic crashes is 21-25 (98 killed - 11.95% of the total).
- It is interesting to note that in known cases only 12.81% of all traffic crashes occurred during inclement weather (rain, snow, sleet, freezing temp., fog or mist).
- Of all traffic crashes reported statewide, 74.63% were property damage only.
- Of all traffic crashes, 70.78% occurred during the daylight hours and 75.15% occurred on dry pavement.
- Of all fatal Missouri traffic crashes, 59% involved only one vehicle.
- Jackson County recorded the most traffic fatalities with 76.

It is hoped that the information in this booklet will be of value to you. Certainly it is the most comprehensive look available at the crash problem in Missouri.

*Updated 1996 Licensed Drivers 3,797,574

¹ Number of deaths per 100 million miles of vehicle travel.

² Number of deaths and injuries per 100 million miles of vehicle travel.

³ The 1995 cost figures have been calculated using a different National Safety Council cost estimate formula. The 1993 and 1994 cost figures also have been recomputed using this formula. As a result, the 1993 and 1994 costs displayed in this publication are different than those previously published. 1993 - 1995 costs are not comparable to prior years since different cost formulas were utilized.

Note: The type of crash is determined by the first harmful event.

Statewide Traffic Deaths by County

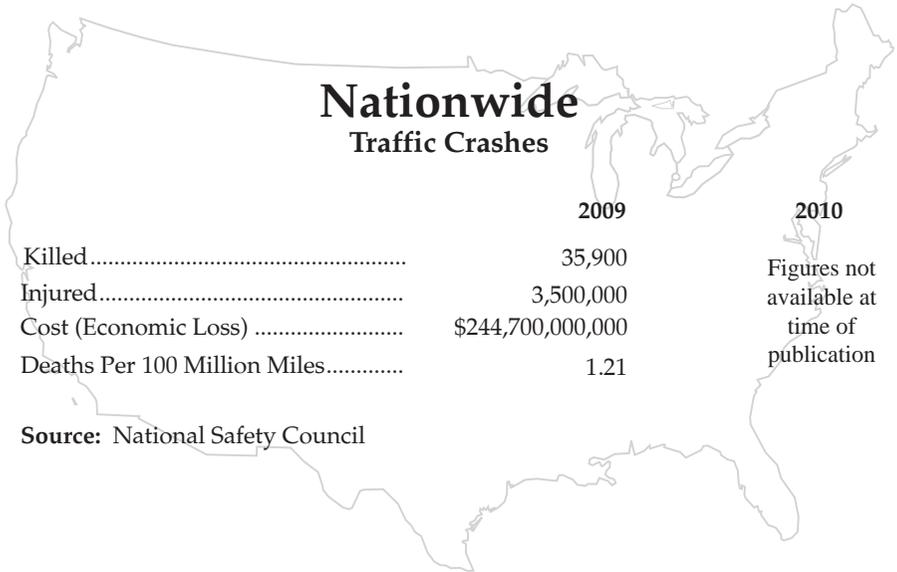

Statewide Traffic Deaths by County - The numbers on this map include both rural and urban traffic deaths for each county and the City of St. Louis. The City of St. Louis is carried separately because it is not located within a county.

The first figure in each county represents the total deaths during 2010. The second figure (the figure with the decimal point) represents the average deaths per year for the last ten years. By removing the decimal point, the number represents the total deaths for a 10-year period. The third figure indicates the increase or decrease of traffic fatalities in each county from the year 2009 to 2010. If there is no change it will be indicated by a -0-.

For example: Atchison, the topmost, western county, shows 0 persons were killed last year. There has been an average of 1.5 people killed each year for the last 10 years or a total of 15 over the 10-year period.

Drinking and Crashes (Includes drivers of all vehicles and pedestrians) - Whether or not a person has been drinking cannot always be determined at the scene of a crash. It is generally impossible to determine the persons who have had one or a few drinks; yet, these individuals may be as much of a hazard as the obvious drunk. Because of the time lapse from the moment of occurrence until an officer arrives at the scene to make the investigation, a person's condition concerning drinking can change a great deal. In cases where the individual may have been removed to a hospital, doctor's office or funeral home, his condition may never be determined.

Persons Killed in Alcohol Related Crashes218
 Persons Injured in Alcohol Related Crashes3,825

Fatal Traffic Crashes:

Drinking Involved208
 No Drinking Involved.....556
 Information Not Known14

All Traffic Crashes:

Drinking Involved6,285
 No Drinking Involved.....139,746
 Information Not Known5,319

In Known Cases:

- 4.30 out of every 100 traffic crashes in the State involved drinking.
- In rural crashes, 6.25 out of every 100 traffic crashes involved drinking.
- 27.23 out of every 100 fatal crashes involved drinking.
